

CloudClipboard for Windows - Instructions

1. Setup your cloud once you run the app first time or if you want to change one to another

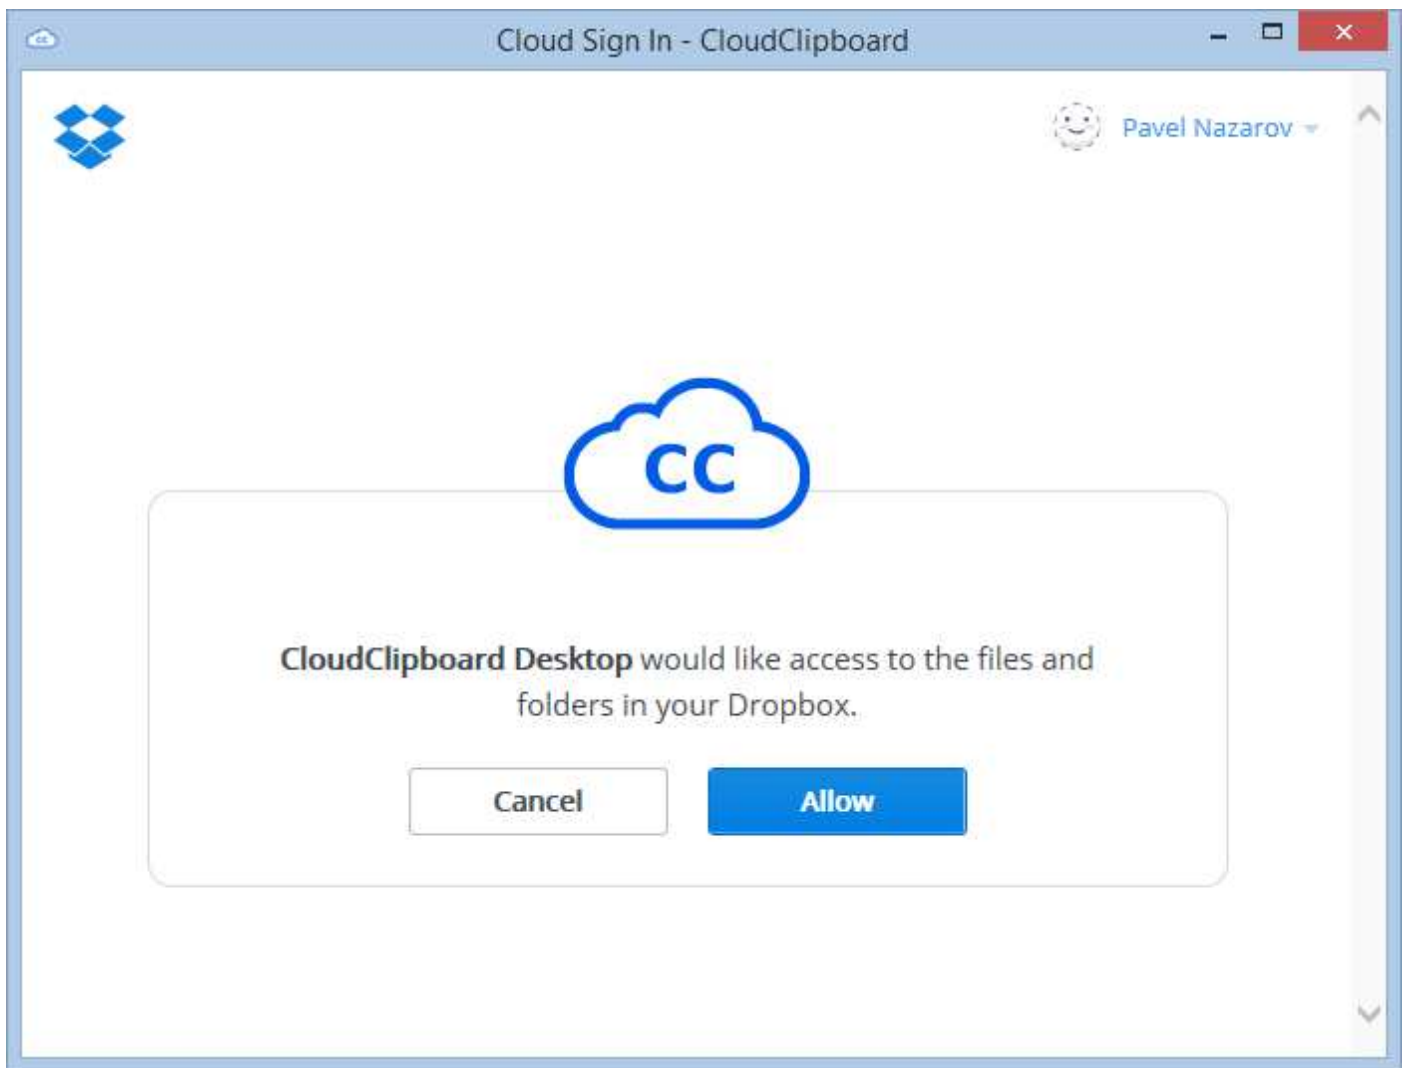

Choose a cloud type to copy your clipboard data

Authenticate using your login

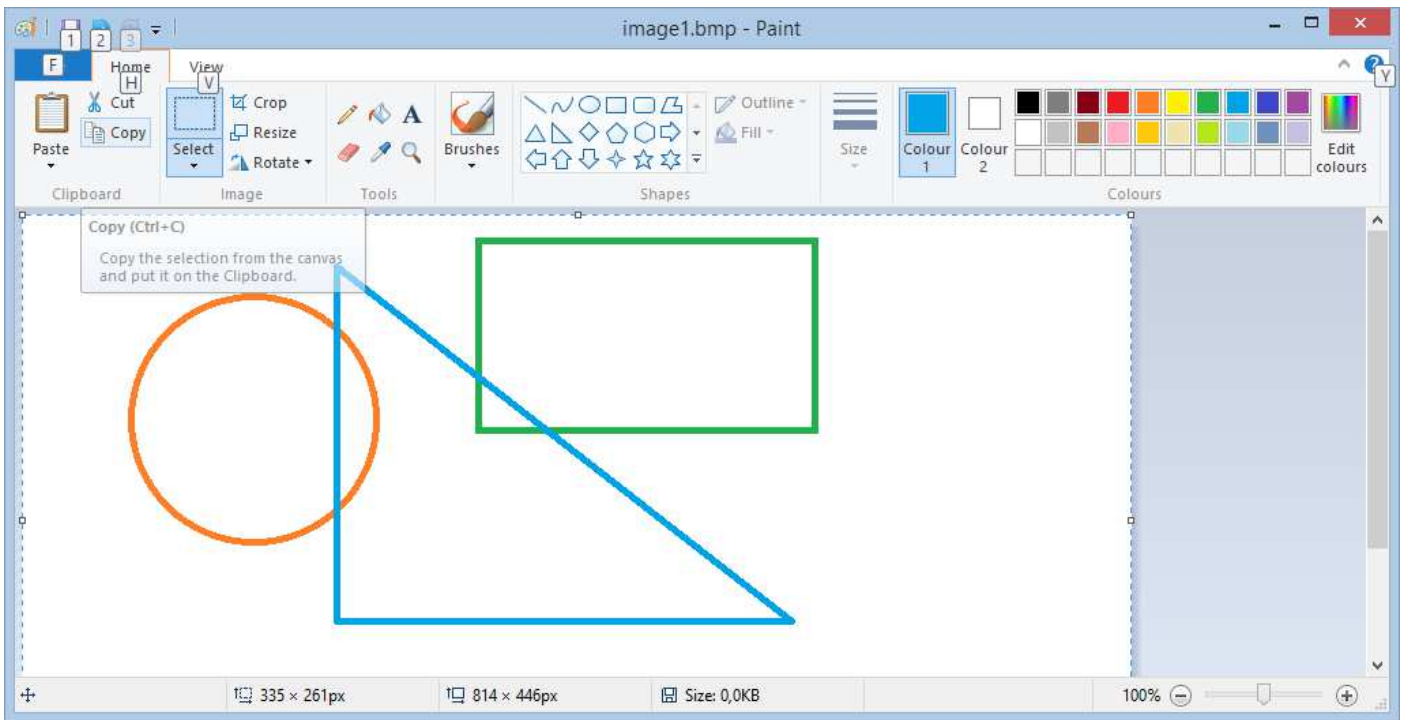

Authorize the app

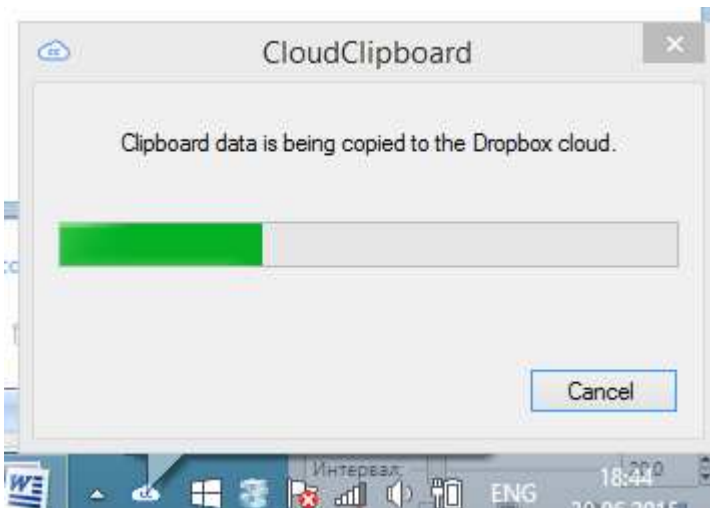

Now, the app is ready to copy clipboard data to your cloud

2. Copy some text, image or files and the app will copy that data to your cloud to the CloudClipboard folder in the root.

If you copy many files then the waiting dialog will be appeared in the right bottom corner to show you progress.

Check your cloud for the copied data

- Photos
- Sharing
- Links
- Events
- File requests

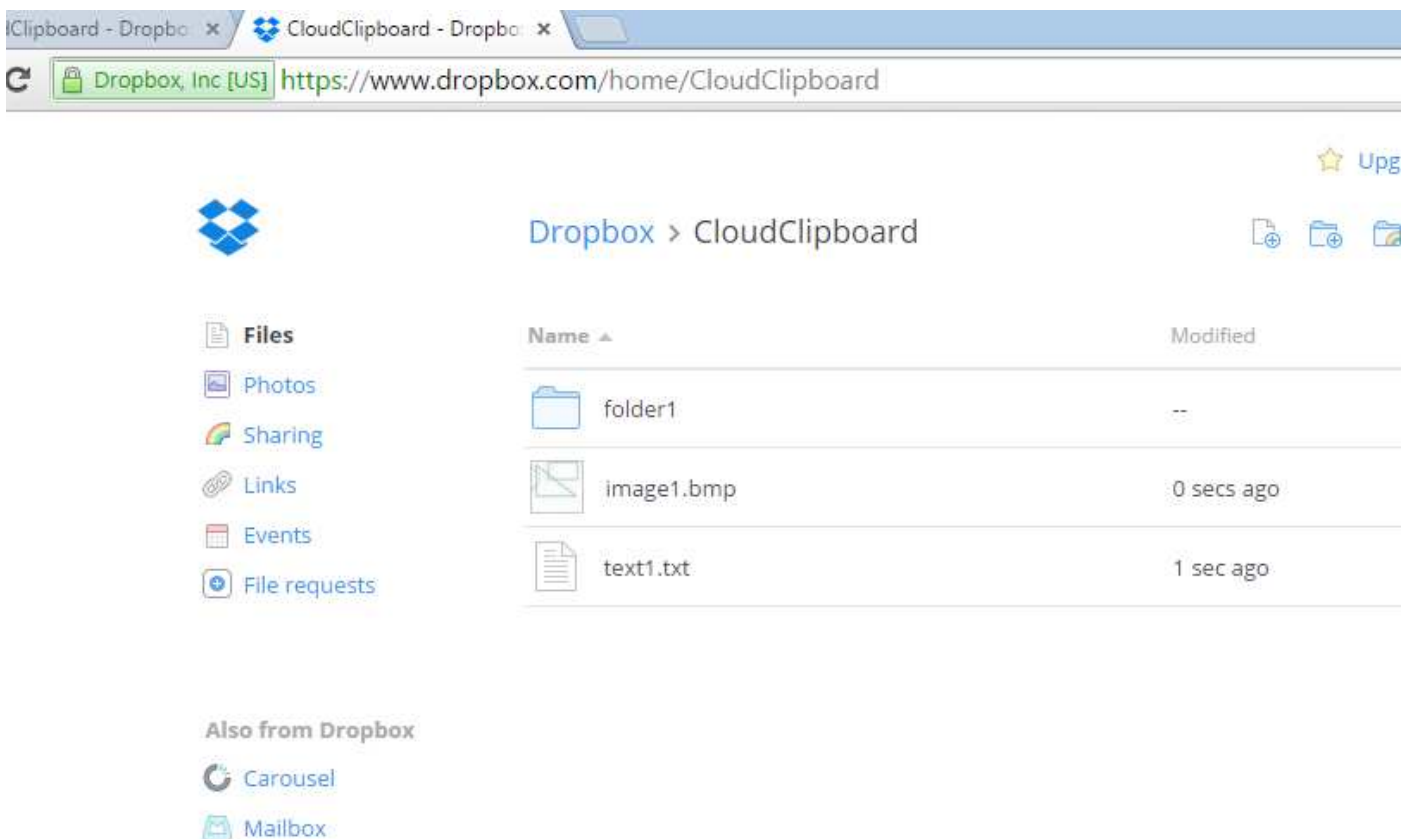

Now, our copied image is on the cloud.

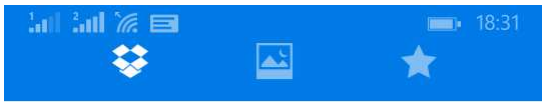

Also, if we copy files

then we get them on the cloud in the structure we copy from the local file system

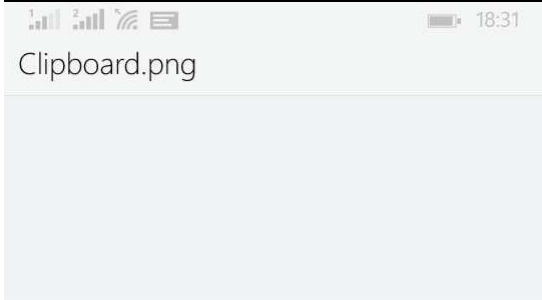

3. Use the data from your mobile device throw official vendor (Dropbox, Google, Microsoft) cloud client apps.
